

---

## Author

---

The following was written solely by [Alexander McKeown](#).

---

## 1) How to run

---

In the directory of the submission file execute the following in order.  
Open two terminals.

1. In terminal A type “python3 Bob.py” into the terminal
2. Then in terminal B type “python3 Alice.py” into the terminal

\*Important do not wait for either terminal to finish before executing the other .py file.

---

## 2) Expected Outcomes

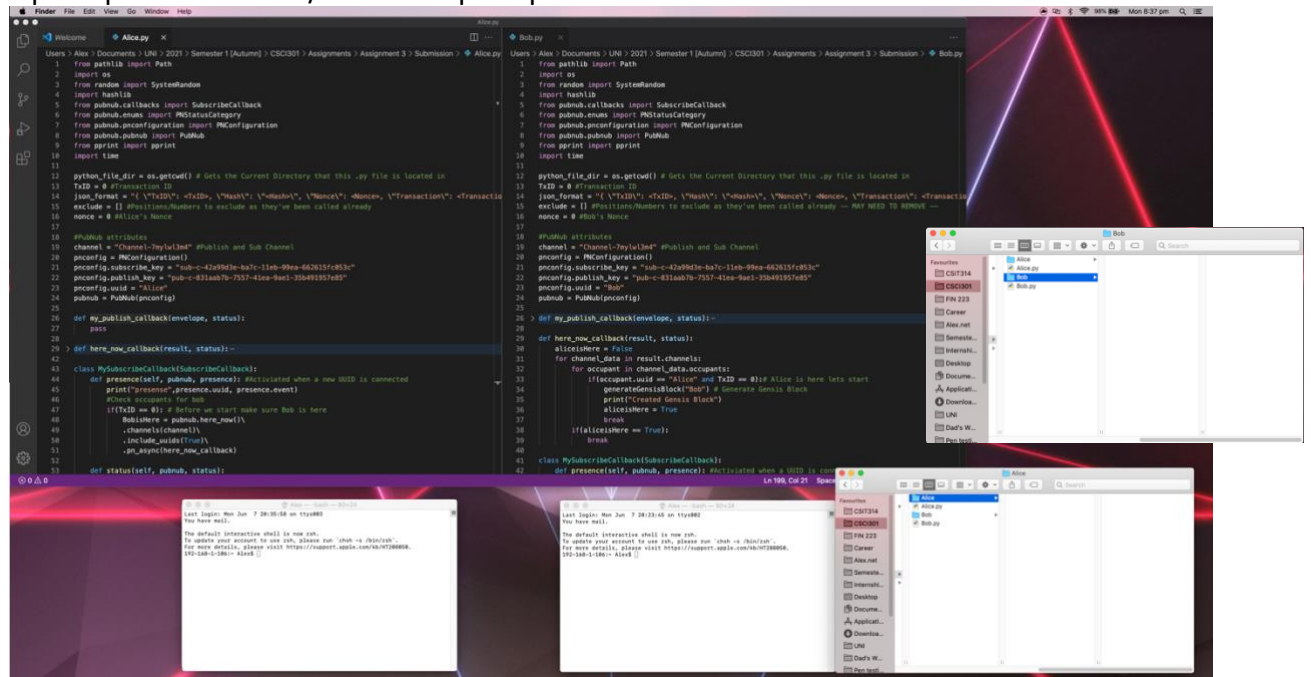

---

The program will print out the transactions in terminal as well as log the content in two separate directory's (“Bob” and “Alice”) in JSON format.

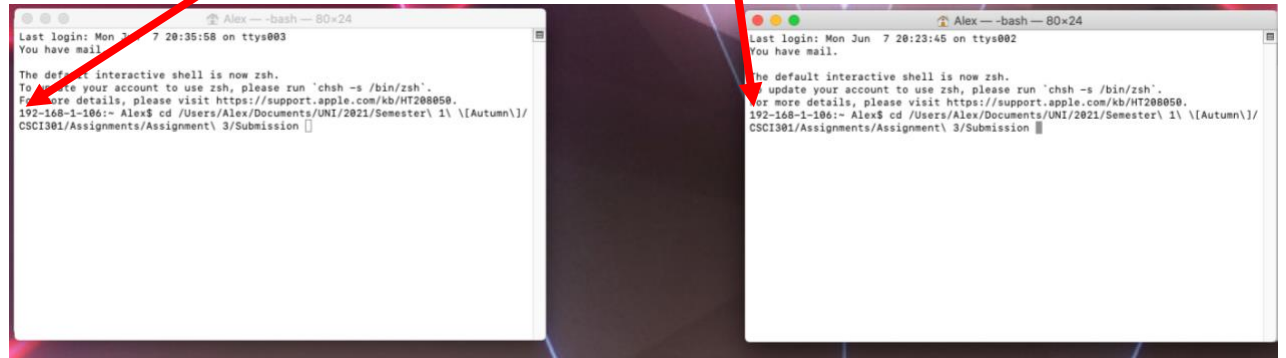

The terminal output is based on this format: TxID;Hash;Nonce;Position

### Step 1

Open up two terminals/command prompts

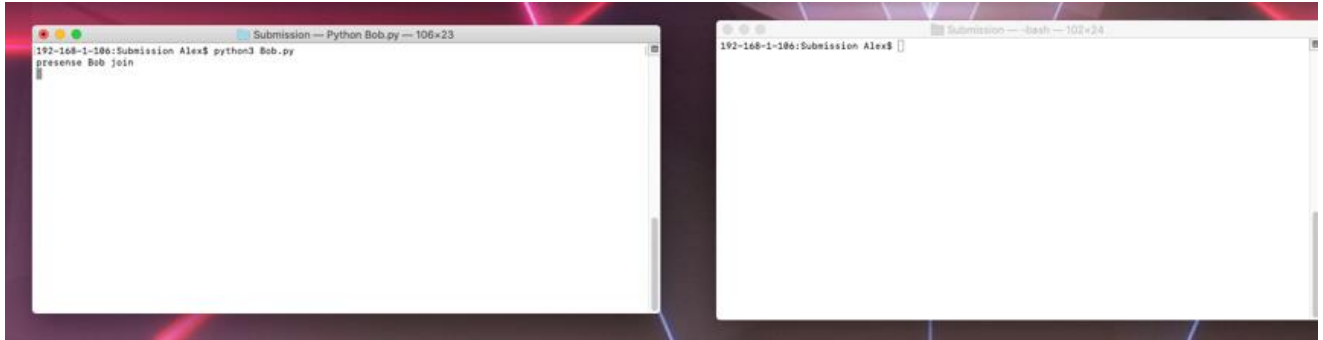

Navigate to the .py files location (cd ../)

## Step 3

## Execute Bob.py (python3 Bob.py)

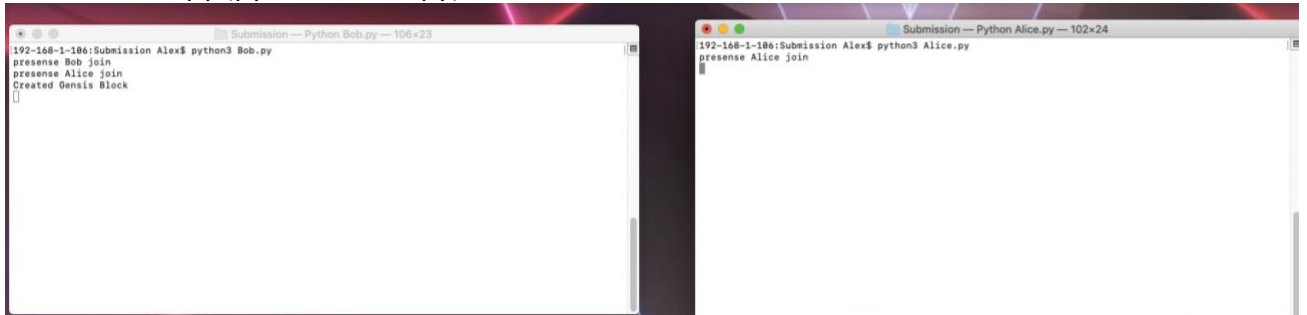

```
Submission — Python Bob.py — 106x23
192-168-1-106:Submission Alex$ python3 Bob.py
presense Bob join

Submission — bash — 102x24
192-168-1-106:Submission Alex$
```

Bob.py will wait for Alice to join the channel before commencing

## Step 4

## Execute Alice.py (python3 Alice.py)

```
Submission — Python Bob.py — 106x23
192-168-1-106:Submission Alex$ python3 Bob.py
presense Bob join
presense Alice join
Created Genesis Block

Submission — Python Alice.py — 102x24
192-168-1-106:Submission Alex$ python3 Alice.py
presense Alice join
```

Now that Alice is present the program will begin the tic-tac-toe game!
